

1. `docker run` - run a container from an image
2. `docker pull` - pull an image from a registry
3. `docker push` - push an image to a registry
4. `docker build` - build an image from a Dockerfile
5. `docker ps` - list running containers
6. `docker stop` - stop a running container
7. `docker start` - start a stopped container
8. `docker restart` - restart a container
9. `docker logs` - show the logs of a container
10. `docker exec` - execute a command inside a running container
11. `docker images` - list available images
12. `docker rm` - remove a container
13. `docker rmi` - remove an image
14. `docker inspect` - show information about a container
15. `docker network create` - create a network for containers to communicate
16. `docker network connect` - connect a container to a network

17. `docker network disconnect` - disconnect a container from a network
18. `docker port` - show the mapped ports of a container
19. `docker cp` - copy files between a container and the host
20. `docker commit` - create a new image from a container's changes
21. `docker login` - log in to a registry
22. `docker logout` - log out of a registry
23. `docker tag` - tag an image with a new name
24. `docker export` - export the contents of a container as a tar archive
25. `docker import` - create a new image from a tar archive
26. `docker save` - save an image as a tar archive
27. `docker load` - load an image from a tar archive
28. `docker top` - show the processes running inside a container
29. `docker stats` - show resource usage statistics of containers
30. `docker diff` - show the changes made to a container's filesystem
31. `docker events` - show the events generated by Docker

32. `docker history` - show the history of an image
33. `docker pause` - pause a running container
34. `docker unpause` - unpause a paused container
35. `docker kill` - send a signal to a container to stop it abruptly
36. `docker wait` - wait for a container to exit and return its exit code
37. `docker attach` - attach to a running container's console
38. `docker buildx` - build and push multi-platform images
39. `docker compose` - manage multi-container applications with Docker Compose
40. `docker swarm` - create and manage a cluster of Docker nodes
41. `docker volume create` - create a named volume for persistent data storage
42. `docker volume ls` - list available volumes
43. `docker volume rm` - remove a named volume
44. `docker system prune` - remove all unused objects from Docker
45. `docker system df` - show the usage of Docker objects

46. `docker system events` - show the events generated by Docker on the system
47. `docker system info` - show the system-wide information about Docker
48. `docker system inspect` - show detailed information about Docker objects
49. `docker system logs` - show the system logs of Docker
50. `docker system version` - show the version of Docker installed on the system
